

Project Initialization and Planning Phase

Date	23 June 2026
Team ID	XXXXXX
Project Name	Credit Card Approval Prediction System
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement):

The traditional credit card approval process is time-consuming and involves manual verification, which may lead to delays and inconsistent decisions. This project uses machine learning to predict credit card approval based on applicant information, helping financial institutions make faster and more accurate decisions.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A salaried employee applying for a credit card.	Get my credit card approved quickly.	The approval process takes several days due to manual verification.	Banks need to verify multiple applicant details before making a decision.	Frustrated by the delay and uncertain about my application status.
PS-2	A first-time credit card applicant.	Check whether I am eligible before applying.	I don't know if my profile meets the bank's approval criteria.	Credit card eligibility depends on multiple financial and personal factors.	Confused and worried that my application may be rejected.
