Customer Journey Map

The customer begins by exploring different credit card options and checking the eligibility criteria. After selecting a suitable card, they enter their personal and financial details through the Credit Card Approval Prediction System. The machine learning model evaluates the information and predicts whether the application is likely to be approved or rejected, helping the customer make informed decisions before applying.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions	• Searches for credit card options. • Checks eligibility criteria. • Compares different credit card benefits.	• Enters personal and financial details. • Reviews the application information. • Submits the application for prediction.	• Waits for the prediction. • Reviews the approval/rejection result. • Decides whether to apply for the credit card.
Touchpoint	• Credit Card Approval Prediction Website • Home Page • Eligibility Information	• Prediction Form • Input Fields • Predict Approval Button	• Prediction Result Page • Approval/Rejected Message • Confidence Score
Customer Thought	• Am I eligible for a credit card? • Which card is suitable for me? • What information do I need?	• Is the information I entered correct? • Will my application be approved? • Have I completed all the required fields?	• What will be the prediction? • Why was my application approved or rejected? • How can I improve my approval chances?

Customer Feeling	The customer is interested in exploring credit card options and checking eligibility. They are hopeful about getting their credit card approved.	The customer feels careful while entering personal and financial information. They are slightly nervous about the approval outcome.	The customer feels anxious while waiting for the prediction result. They feel happy if approved or understand the reasons if rejected.
Process Ownership	The customer explores credit card information and eligibility. The Credit Card Approval Prediction System provides guidance and eligibility details.	The customer enters personal and financial information. The system validates and processes the application data.	The machine learning model analyses the applicant's information. The system displays the credit card approval prediction and confidence score.
Opportunities	• Provide an eligibility checker. • Improve credit card information. • Simplify website navigation.	• Reduce form complexity. • Add real-time input validation. • Improve user experience.	• Explain prediction results. • Suggest ways to improve approval chances. • Faster prediction processing.
