Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system between external entities, processes, and data stores. Use the symbol legend below as a guide.

Symbol	Name	Description
Oval / Rounded shape	External Entity	A person or system outside the project that sends or receives data (e.g., Customer, Bank Administrator).
Rectangle with numbered header	Process	An activity that transforms incoming data into outgoing data (e.g., Applicant Details Entry, Data Preprocessing, Credit Card Approval Prediction, Result Generation).
Rectangle (solid fill, no number)	Data Store	A place where data is stored for later use (e.g., Application Database, Credit Record Database, Trained Model, Prediction Results).
Labeled arrow	Data Flow	The movement of data between external entities, processes, and data stores, labeled with the information being passed (e.g., Applicant Details, Processed Data, Prediction Result, Approval Status).

Example

The diagram below illustrates how the symbols above come together to form a complete Data Flow Diagram (DFD) for the Credit Card Approval Prediction System.
