

Solution Requirements

Date	25 June 2026
Team ID	XXXXXX
Project Name	Credit Card Approval Prediction System
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Define the requirements that describe what the Credit Card Approval Prediction System should do and how it should perform.

- **Functional Requirements (FR):** Describe the features and functions of the system, such as accepting applicant details and predicting credit card approval.
- **Non-Functional Requirements (NFR):** Describe the quality of the system, including performance, security, reliability, and usability.

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S. No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Users can access the Credit Card Approval Prediction System through the web application.	High
2	Authorization levels	Users can enter applicant details and view prediction results.	High

3	External interfaces	The system connects with the trained Machine Learning model and label encoders to generate predictions.	Medium
4	Transactions processing	The system accepts applicant information, validates the input, processes it through the ML model, and displays the prediction result.	High
5	Reporting	The system displays the credit card approval status along with the prediction confidence score.	High
6	Business rules, etc.	Credit card approval is predicted based on applicant details such as income, education, employment, family status, housing, and other relevant factors.	Low
7	Compliance to laws or regulations.	The system protects applicant information and follows basic data privacy practices.	High
8	Other	The system should support future enhancements, such as adding new machine learning models or additional applicant features.	Low

Step 2: Non-Functional Requirements (NFR)

S. NO	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	The system should generate predictions quickly.	Response time less than 3 seconds.
2	Scalability	The system should support future expansion and additional applicant records.	Supports future scalability.
3	Security & Data Privacy	Applicant information should be processed securely and used only for prediction.	Secure handling of applicant data.
4	Reliability & Availability	The system should provide consistent prediction results with minimal downtime.	Available 99% of the time
5	Usability & Accessibility	The interface should be simple, responsive, and easy to use.	Easy navigation with a user-friendly interface.
6	Maintainability	The system should be easy to update and maintain.	New features can be added with minimal code changes.
