

Problem-Solution Fit

Date	27 June 2026
Team ID	xxxxxx
Project Name	Credit Card Approval Prediction System
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

Many credit card applicants are uncertain whether their applications will be approved before applying. Financial institutions also spend significant time reviewing applications manually, which can delay the approval process.

1. CUSTOMER SEGMENT(S) [CS] • Credit Card Applicants • Bank Customers • Salaried Employees • Financial Institutions	6. CUSTOMER LIMITATIONS EG. BUDGET, DEVICES [CL] - Limited knowledge of approval criteria - Time constraints - Lack of financial guidance - Uncertainty about eligibility	5. AVAILABLE SOLUTIONS PROS & CONS [AS] Pros: Bank eligibility checks, Online eligibility tools Cons: Manual verification, Time-consuming
2. PROBLEMS / PAINS + ITS FREQUENCY [PR] • Uncertainty about credit card approval (High) • Manual verification delays (High) • Rejected applications due to unknown eligibility (Medium)	9. PROBLEM ROOT / CAUSE [RC] • Lack of awareness of credit card eligibility criteria • Manual verification process • Dependence on bank approval procedures	7. BEHAVIOR + ITS INTENSITY [BE] • Frequently search online for credit card eligibility. • Compare different credit card offers. • Depend on online prediction tools before applying.
3. TRIGGERS TO ACT [TR] • Need for a new credit card • Check eligibility before applying • Faster approval decision	10. YOUR SOLUTION [SL] The Credit Card Approval Prediction System uses a Random Forest machine learning model to predict whether a credit card application is likely to be approved or rejected based on applicant details through a Flask web application, enabling faster and more informed decision-making.	8. CHANNELS OF BEHAVIOR [CH] ONLINE: Credit Card Approval Prediction Website OFFLINE: Banks, Financial Institutions
4. EMOTIONS BEFORE / AFTER [EM] Before: Confused, uncertain, anxious. After: Confident, informed, satisfied.
